

- negative regulation of organelle organization
- MAPK cascade
- regulation of cellular response to insulin stimulus
- positive regulation of interferon-alpha production
- White fat cell differentiation
- positive regulation of cell death
- enzyme-linked receptor protein signaling pathway
- cellular response to organic cyclic compound
- intracellular receptor signaling pathway
- Ectoderm differentiation
- cellular component morphogenesis
- EGF/EGFR signaling pathway
- endocytosis
- supramolecular fiber organization
- DNA-templated transcription
